

5th & 6th primary Elsians' Day

What would be the world like in 2050?

In work and life, success often hinges on effective application of knowledge to solve problems and create new ideas and information. Working collaboratively during project work prepares students for modern citizenship and work, as most complex communal, social, and workplace problems are solved by groups, not individuals. Having students work together to achieve a goal helps them recognize the value of the contributions and perspectives of all team members and prepares them for life in the 21st century.

During the process, students should use project based learning strategies to choose a field / a community / a device and imagine what it will look like in the future. They are asked to create ideas for the world in 2050. Show us the advantages and disadvantages of that idea. Show us the evolution of the idea. Create a marketing campaign for their idea or model of their project and finally present their data and reflections in the most creative way.

N.B:

- Students are allowed to come out of uniform according to the costumes agreed upon with their class teachers.
- Students will bring the materials of academic subjects according to the class schedule starting 5th period.

Thanks in advance for your cooperation
